

Week 6 Progress Report

General Objective

The key objective of Stretch Goals (Project 2 of 2) is to provide yoga business owners with a simple and seamless way to establish and manage their business online. The project aims to develop a functional website builder specifically designed for yoga businesses, allowing clients to create and manage professional websites without requiring extensive technical or software development knowledge.

Stretch Goals will simplify the process of building an online presence by providing features and tools tailored to the needs of yoga businesses. The project will also investigate the limitations of existing website builders and competitors to identify opportunities to better address the needs and expectations of yoga business owners.

Our goal is to ensure yoga business owners can focus on running and growing their business rather than worrying about the technical complexity of building and maintaining a website.

Competitor Research

Competitors		
mindbody	momence	OfferingTree
Limitations		
• High Costs • Difficult cancellation terms • Poor customer support • Too many new functionalities • Frequent app glitches	• AI service feature is poor. • Reporting functionality is poor. Too many steps to access information. • No "off switch" or bulk editing option for cancelling member subscriptions. • There is no account deletion.	• Reporting complexity • Too many functionalities.
Brainstorming		

• Costs may be influenced by the extensive infrastructure, complex functionality and services required to maintain an all-in-one business management platform. Additional costs may also apply for API access and other services. • Users may experience confusion surrounding cancellation policies. Policies may be difficult to understand or may not be visible or accessible when users need them. • The extensive range of features may create unnecessary complexity for businesses and users who only require basic functionality. Frequent changes to the platform may also create challenges for existing users adapting to new features. • Some users report difficulties with customer support, highlighting an opportunity to investigate how support services could be made more accessible and effective.	• Implement a selection function that allows users to bulk edit member subscriptions, such as deleting or modifying multiple subscriptions simultaneously. • Implement an account deletion function to give users greater control over their account and personal information. • Implement an effective AI-powered customer support function to assist users with common queries. • Minimise unnecessary functionality and complexity to provide a simple and intuitive user experience. • Similar issues as mindbody.	• OfferingTree has received positive feedback for its user experience. It would be useful to use OfferingTree as a foundation for identifying effective design approaches for our project. • Reported bugs highlight the importance of effective bug identification and management. We should establish a process for reporting, prioritising, tracking and resolving bugs throughout development. • The extensive range of functionalities may divert attention from essential features such as class scheduling and registration. Our website should therefore prioritise simplicity and focus on the core needs of yoga businesses and their customers.

Risks, Requirements & Constraints

Project Risks

Project delays

Project delays may occur due to ineffective project management or unexpected changes to work and university schedules, which may shift priorities away from the project. This could result in project milestones being delayed by up to one week.

Loss of project data

Project data may be lost due to poor project management and version control. Project data specifically concerns the development of the low and medium fidelity prototypes. Losing this data will delay the overall progress of the project.

Pandemic

In the event of a pandemic, in-person meetings may become restricted. However, as the project is primarily software-based, meetings and collaboration can be conducted online, allowing project activities to continue remotely.

Cyber-attacks

Cyber-attacks targeting QUT may restrict project progress by limiting the team's access to university resources, including essential software, systems and computing facilities.

Project Requirements

Secure Cloud

To maintain the security and privacy of future client data, secure cloud storage must be utilised to ensure that all client data is securely stored and managed.

Project Constraints

Software

QUT students have access to a limited range of software subscriptions. If software or services required for the project are not available through QUT, additional funding may be required to obtain the necessary resources and ensure the project can be completed effectively.

System Complexity

The flexibility provided to users to customise their websites may increase the complexity of the system and development requirements. If this complexity becomes difficult to manage within the project timeframe, the level of customisation may need to be restricted by introducing predefined templates and design options.

Timeline & Deliverables

Number	Focus	Deliverable	Dependency	Milestone Date
1	- Meet Supervisor - Discuss project goals and expectations - SCIPs signed	Meeting notes and project brainstorming.		Week 5
2	Competitor research	Identify competitors. Brainstorm competitor limitations.	1	Week 6
3	- Stakeholder analysis (Vivaan & Toby) - Low Fidelity prototype (FIGMA) (Bailey, Jad & Wiriya) - Project Management (GitHub) (Bailey & Wiriya)	- Demonstrate and review the stakeholder analysis for project reporting. - Develop a medium-fidelity website prototype to visualise the proposed design and functionality. - Develop sprint plans to establish clear milestones and monitor project progress.	1, 2	Week 7
4	- Assign team members to work on different aspects of the medium fidelity project. - Implement supervisor feedback to low fidelity model	- Finalised low fidelity model. - Assigned roles for medium and high fidelity development. Roles will be assigned depending on members strengths and interests.	3	Week 8
5	Design medium fidelity on software	Medium fidelity drafting for feedback.	4	Week 9
6	Improve and test medium fidelity model.	Medium fidelity drafting for further feedback.	5	Week 10
7	- Finalise medium fidelity model - Record demonstration of model.	- Finalised medium fidelity model. - Functional demonstration of the medium fidelity model.	6	Week 11
8	Prepare project deliverables and speeches.	- Project report + slideshow. - Medium fidelity demo. - Speeches	3, 4, 7	Week 12
9	Project Delivery & Oral Defence	Final project presentation and demonstration.	4, 8	Week 13

	• Project Report submission	• Final project report	3, 4, 7	Week 14
--	-----------------------------	------------------------	---------	---------

Note: This timeline is only an estimate and may change as the project progresses.
