

Stakeholder Identification and Analysis:

Stakeholder	Type	How they're involved	Needs/Problems	Desired outcome / interest
Project Client / Strong & Steady Yoga	External	Key client who provides the requirements and feedback for the project being completed.	Needs an effective system which will not be as complicated and expensive as existing platforms but will solve the problems which occur in the practice of individual yoga teachers.	A system that allows Yoga Business owners to create their website which can book appointments, take payment etc.
Yoga Business Owners	External	Use the service to create a platform / website that can manage their services, bookings, payments, educational content and client information.	Existing systems can be expensive, complicated and designed specifically for big studios. They need a simple solution in managing their business without having too much technological knowledge.	Create a user-friendly web-based software suite with a "one stop" feel.
Yoga Customers	External	Use the client facing platform that the Yoga Business Owners created	Can have difficulties in	Easy to use platform to connect with a Yoga instructor and book services.

		to look at services, complete forms book sessions etc.	understanding complicated booking process. They need a simple booking process and clear information about classes.	
Development Team	Internal	In charge of creating the system for the Project Client based on their stated requirements.	Must provide stakeholders' involvement, technical feasibility, appropriate scope, and clearly defined requirements.	Clear requirements and achievable scope from the Project Client that allow us to create a reliable, secure and maintainable system.
QUT team supervisor	Internal	Provides academic assistance and guidance to the Development Team and related to project progress and deliverables.	Needs confirmation of their ability to correctly analyse requirements, design, manage projects and use professional approach.	Evidence of planning, clear client communication and a successful project handover.
External Service Providers	External	Provide cloud hosting, payment processing or calendar integration services.	Need reasonable use of their services and APIs as well as safe and	Secure and reliable integration into the created Stretch Goals System.

			reliable communication with the Stretch Goals system.

Stakeholder Needs → Problems → Requirements

Yoga Business Owners

Problem / Need

- Existing yoga management software can be expensive.
- Existing systems can be complicated to configure.
- Many systems are designed for larger physical studios rather than solo instructors.
- Business owners may need multiple services to manage their business.
- Some owners are concerned about storing client information online.

System Requirements Derived

- Simple website creation process.
- Business dashboard for managing the system.
- Class and schedule management.
- Customer management.
- Booking management.
- Payment management.
- Secure storage of customer information.
- Ability to manage website content.
- Potential integration with calendars and payment providers.

Yoga Customers

Problem/Need

- Customers need to easily understand what services/classes are available.
- Booking should not be complicated.
- Customers need to complete required information such as waivers.
- Payment should be straightforward.
- They need access to relevant class and instructor information.

System Requirements Derived

- Sign-up and login
- Simple customer-facing website
- Business overview
- Booking functionality
- Class details
- Instructor/time information
- Membership/payment details
- Booking functionality
- Digital waiver functionality

Project Client

Problem/Need:

The client needs the system to address genuine problem rather than simply being an immersive technical application

Requirements derived:

- Solution should be achievable and practical
- System should reflect what a solo yoga business need
- System should provide a user-friendly experience
- Features should be prioritised based on business value

Development Team

The team must decide what can be planned, prototyped or developed within the project period because the project has a wide intended scope.

Requirements derived:

- Project scope that is well-defined.
- Requirements were prioritized.
- Analysis of technical viability.
- Architecture that is sustainable.
- Relevant security factors.
- Explicit documentation.

QUT Teaching Team/Tutor

Need: Tutor needs to see that team is following professional and structured project process

Expectations/Requirements:

- Documented requirements.
- Evidence of stakeholder engagement.
- Project planning.
- Regular progress.
- Appropriate design decisions.
- Professional communication.
- Risk/privacy/ethical considerations.

External Services Provider

Examples include calendar, payment and cloud providers

Need:

System needs to communicate reliably with external services

Requirements derived:

- Integration design / Secure API
- Reliable payment processing
- Appropriate handling of third-party data
- Calendar integration where required
- Access control and Authentication

Stakeholder Priority

Stakeholder	Influence	Interest	Priority
Project Client / Strong & Steady Yoga	High	High	Manage closely
Yoga Business Owners	High	High	Manage closely
Yoga Customers	Medium	High	Keep involved
Development team	High	High	Manage closely
External Services Provider	Medium	Medium	Monitor/Manage as required
QUT Teaching Team/Tutor	High	High	Manage closely

User Stories/Use Cases

Business Owner

US01 - Create a website

As a yoga business owner, I want to create a professional website using templates, so that I can establish an online presence without needing extensive web development knowledge.

US02 - Manage classes

As a yoga business owner, I want to create and edit classes and schedules, so that my customers can see accurate class information.

US03 - Manage customers

As a yoga business owner, I want to view and manage customer information, so that I can effectively manage my clients.

US04 - Manage bookings

As a yoga business owner, I want to view and manage bookings, so that I can keep track of upcoming sessions and attendance.

US05 - Manage payments

As a yoga business owner, I want to view payment information, so that I can keep track of customer payments and outstanding payments.

US06 - Manage website content

As a yoga business owner, I want to edit my website content, so that I can keep information about my business and services up to date.

Yoga Customer

US07 - View yoga business

As a yoga customer, I want to view a yoga business's website, so that I can understand the services and classes they offer.

US08 - View class details

As a yoga customer, I want to view class details including the instructor, time and other relevant information, so that I can decide whether a class is suitable for me.

US09 - Sign a waiver

As a yoga customer, I want to complete a digital liability waiver, so that I can meet the requirements for participating in a yoga session.

US10 - Book a class

As a yoga customer, I want to book an available class, so that I can reserve a session with my chosen yoga business.

US11 - Make a payment

As a yoga customer, I want to make a payment for a booking or membership, so that I can complete my purchase online

Stakeholder Needs and Problems:

Stakeholder	Need / Problem	Implication for Stretch Goals
Yoga Business Owner	Current systems are costly and designed for larger studios to use.	Provide an affordable system for solo yoga entrepreneurs.
Yoga Business Owner	Need to manage a range of business activities (Scheduling, payments etc) without the use of multiple different systems.	Provide a “one stop” shop system for business owners.
Yoga Business Owner	Need an online presence for their business.	Allow business owners to build/ host their own professional website.
Yoga Business Owner	Need to manage bookings and scheduling.	Provide an online booking portal for Yoga customers to see hours available and make appointments.
Yoga Business Owner	Need created bookings to appear in scheduling Calander and show as an “unavailable” appointment time for other Yoga Customers.	Consider use of integrating google Calander system functionality when business owners are creating their own platform.
Yoga Business Owner	Problem of storing confidential or private client information online / insecurely.	Create a secure and cloud-based database for client information with appropriate access types and security controls.
Yoga Business Owner	Need to confirm that clients complete required documentation.	Distribute and collect completed client intake and liability waiver forms. Connect status of these to Yoga Customers account.
Yoga Customers	Need an easy way to find yoga services and connect with an instructor.	Yoga Business Owner information and services are clearly displayed on their platform with easy access to view scheduling and other relevant information.
Yoga Customers	Need easy way to book yoga services.	Provide a clear and easy to use booking service.
Yoga Customers	Need to complete liability and intake information forms.	Provide users with an easy way to access and upload these form.
